

DelegasiKu

Verified identity becomes trusted delegation.

Turning e.id-verified identity into case-specific, expiring, and revocable authorization to act for someone else.

Identity alone does not prove authority.

Organizations see an identity, but not current authorization status.

Static paper and chat screenshots cannot be revoked.

Validity cannot be checked in real time during high-stakes decisions.

The representation ecosystem.

Organizations pay for the workflow; citizens and agents use it for free.

One dynamic proof answers five critical questions.

Create, Verify, Accept, Check, Revoke.

Live Demo Sequence: Create → Verify → Accept → Scan ACTIVE → Revoke → Scan REVOKED

e.id is the trust foundation. DelegasiKu is the workflow.

“KYC tells us **WHO** a person is.
DelegasiKu tells us whether that verified person **MAY ACT** here, for this purpose, right now.”

The proof is dynamic, not static.

Paper documents are frozen at issuance; DelegasiKu reflects the current truth.

Turn authorization into a current, checkable fact.

End reliance on outdated, reused KTP photocopies and repeated manual confirmation calls.

Trust

Drastically fewer unauthorized representations.

Speed

Provide receiving staff an immediate, definitive current-status answer.

Auditability

Clear, unforgeable timeline of authority.

Start narrow. Expand across high-trust high-trust workflows.

Revenue: Organizations pay subscriptions for the workflow.

Access: Citizens and representatives remain free at point of use.

Small MVP. Clear boundary. Expandable platform.

MVP Boundary Box

In Scope for Demo:

- 1 verified identity
- 1 seeded demo organization
- 1 permit case
- 1 allowed action
- Workflow evidence

Strictly Out of Scope:

- Not a legally enforceable power of attorney
- No e.id credential issuance

**Verified identity
becomes trusted
delegation.**
